Under REEL Control

— Save time save money

Unique creativity

We have designed, built, and operate two identical steel rod and wire straightening and spooling lines. SEA has also designed, built, and operates a unique carbon fibre bundling machine used for ultra deep-water applications.

Competence you can trust

SEA is accredited to ISO 3834-2:2018 for the rewinding and welding of steel wires and rope. Our welders are certified to ISO 9606-1:2012. Our x-ray machine is accredited to the Czech Office for Nuclear Safety.

Unrivalled product portfolio

SEA can produce umbilical weight and strength elements for multiple applications:

- Stainless Steel rods with OD 5–20mm in DX, LDX, and SDX.
- Wire rope with OD 7–44mm in non- and galvanized steel.
- Carbon fibre rods with OD 6.5mm in single rods or bundles.

One-stop shop

The strength of SEA is the range of services we can offer:

1. Build cable reels
SEA designs and manufactures steel reels. Can be PU coated for stainless steel products. We spool welded rod and wire sections onto 2900mm or 3200mm flange reels.
2. Straightening & spooling
Provide continuous real-time 4-point laser measurements of rod and wire OD. Strict control of product quality throughout the production process. Rods and wires joined with full thickness welds, with weld quality by X-ray in 3-positions. Two production lines give identical results.
3. Transport and logistics
The final element of the one-stop shop is transportation. SEA can safely transport spooled products to your facility.

REEL schedule

SEA can guarantee delivery of high-quality umbilical weight and strength elements on schedule and within budget giving you peace of mind knowing umbilical closure can take place on time.

All in one cable

By straightening, welding, and spooling your umbilical products onto reels, SEA can be your one-stop shop and can guarantee a significant reduction in the number of welds required at closure, saving you time saving you money.

A brief dive into SEA

10 years+

production
of rods and wires

certified IWE welders
working according to
ISO 9606-1:2012, 14175,
14341, and 15608

1,000,000m+

rods & wires
delivered

SEA ISO accredited to,
9001, 14001, 45001,
17020, and 17025

13,000tons+

weight of rods & wires
delivered

we can deliver on time
for umbilical closure
